Message from Organising Secretary

Dear Friends,

India is a tropical country and every year we face the burden of peculiar tropical infections. Tropical fever is the most common cause of fever in our Country. Most of these infections are handled by our primary physicians. Substantial percentage of these patients also need Intensive Care (ICU) management.

Time bound diagnosis and appropriate treatment is a key factor to manage these diseases. While treatment is available in most of the tropical infection, some of the viral infection don't have any specific treatment. Monitoring and appropriate supportive and symptomatic treatment is the only option which can be offered to these group of patients.

Some of the tropical Virus carries the risk of human-to-human transmission and we as medical personnel needs to be aware about these viral diseases to safeguard ourselves and other paramedical staff. We will be focusing on these issues of transmission prevention.

Recently we have developed an Indian Guidelines on the Management of Tropical Fever. In an endeavour to keep us updated about these common problems CCS, APA and Medilink Hospital has planned this one day activity on tropical fever. We hope that this will help us in providing better care to our patients.

Thanks and Regards,

Dr. Rajesh Mishra MD, FNB, EDIC, FCCP
Consultant Intensivist, Physician & Sleep Apnea Expert
Course Director GCC
Managing Trustee, Critical Care Society
